# AgedBook

## Sprint Report - II

### What functionality does the system have at the end of this sprint?

Website users have the ability to view home, register successfully after validating their e-mails and login to the site then publish their books and edit their information later and contact with the publishers to get the books.

### The user stories that have been successfully implemented during this sprint.

#### User-2

##### User-get-book-story: (HIGH PRIORITY) (EPIC)

I am a university student and I have to buy the books which are required for my lessons. It is too hard to afford these books for me. For that reason, I was looking for a donation platform and I saw the website “AgedBook”. There are various books on their site including in education books. I have registered the website than have logged in. I searched it from education category and found the book that I need thanks to the one publisher. I contacted with him and he sent me the book.

(User registers to the site from “Register”, logs in from “Login”, presses “Education” category on homepage and then clicks the “Details” on the ad to see the contact details of publisher.)

**Pre-condition:** User must register and login to site then has to select a category then has to click details of publisher.

**Post-Condition:** User will be able to see the contact details of publisher.

#### User-3

##### User-publish-story: (HIGH PRIORITY)

I wanted to publish books which are redundant for me. I preferred to give the books for the people who need them. And I was be able to publish these books easily thanks to the “AgedBook”. I have the details of the book from publish page. Someone has contacted with me and have taken the one book already in 2 days after I published.

(User goes to the “Publish” page, enters the details of the book and presses “Create”.)

**Pre-Condition:** User has to press “Publish” button, enter the details of the book then press “Create” button.

**Post-Condition:** User will be able to publish her/his books.

**User-4****User-edit-book-story: (MEDIUM PRIORITY)**

I have published a book but I have given it to the someone. I had to deactivate the ad from site, but I did not want to delete it because other people can still reach me to take it and I have checked the donated box. Therefore, I can forward them to who I have donated it.

(User goes to the "MyPublishes" page then checks the donated box.)

**Pre-Condition:** User has to press "MyPublishes" button and check the donated box of the book which has been donated.

**Post-Condition:** User will be able to change the donation statement of her/his book.

**Did you end up making any changes to any of these user stories? Did you break down further any the user stories? Did you identify any new user stories during this sprint and, if so, did you add them to the product backlog or decide to implement them right away?**

No, we did not change anything about the user stories.

**The "lessons learned" at the end of this sprint. What would we do differently next time?**

We could not focus on website design too much. We will try to improve design part next time.

**Updated numbered list of all user stories yet to be implemented with pre- and post-conditions.**

There are not any user stories left yet to be implemented.

**Are there any user stories left unimplemented in the backlog? Are there any new user stories that you would consider adding to the backlog? List these user stories and explain them.**

There are not any user stories left yet to be implemented and we do not consider adding any new user stories.
