1-All necessary steps needed to deploy/install your system:

AgedBook requires only a browser, all the last versions of browsers are supported to visit but it does not guarantee that it will work on the previous versions of browsers. Therefore, all the devices which have latest version of any browser have the ability to open the website.

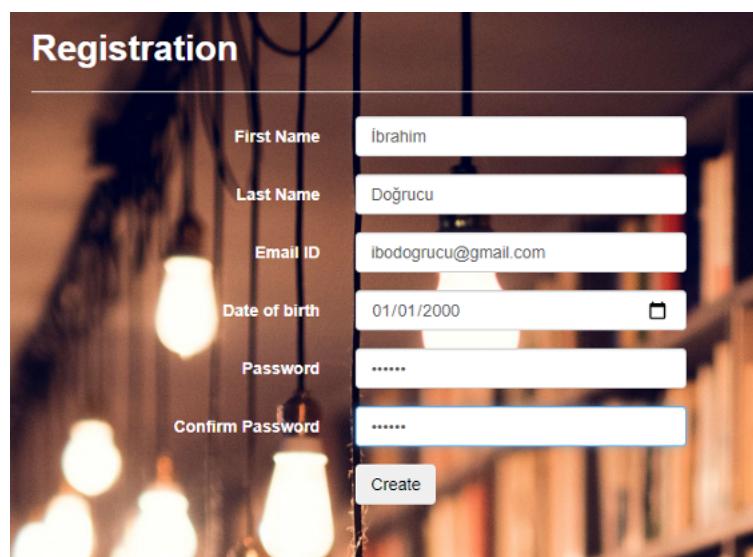

2-The main features of the system to a potential user who may not be familiar with it:

The website has a different communication system which can be not familiar to the users. When a user wants to get a book, he/she has to contact with the publisher directly from his contact details. Because we do not provide online sharing, we are just being a connection bridge between the people who want to share and the people who want to get the books.

3-A walkthrough for the main scenario of using your system; include screenshots as necessary:
